Accuracy of Content

All modules/algorithms/software has been tested by the authors and has been validated to high standards; however, the application of new datasets cannot guarantee the same level of validity.

We recommend regular 'sanity checks' by comparing any results generated to manual or ground truth measurements to ensure reliability. This is particularly advisable when introducing a new data set.

This software is provided "as is", and any expressed or implied warranties, including, but not limited to, the implied warranties or merchantability and fitness for a particular purpose are disclaimed.

In no event shall the regents or contributors be liable for any direct, indirect, incidental, special, exemplary, or consequential damages (including, but not limited to, procurement of substitute goods or services; loss of use, data, or profits; or business interruption) however caused and on any

theory of liability, whether in contract, strict liability, or tort (including negligence or otherwise) arising in any way out of the use of this software, even if advised of the possibility of such damage.

I hereby agree to the above terms and conditions,
